

Solar-powered irrigation for balconies, patios and gardens

GARDENA aquaBloom Set

A clever, automatic watering solution is now available for individuals who previously had to leave their plants on a balcony or patio unattended: The solar-powered GARDENA aquaBloom Set works without electricity or a tap and provides plants in planters and pots with an optimum supply of water. Ideal for when you are away on holiday or just throughout the whole season.

Plant care for when you're not there.

NEW AND
ABSOLUTELY
UNIQUE

True independency

75%

Recent market research has shown that there is no water tap or electricity socket on more than 75 % of European balconies.

With more people moving to cities, the growing segment of urban gardening, offers a huge market potential.

- ➔ The GARDENA aquaBloom Set is unique on the market and offers the only solution for watering without tap and electricity.
- ➔ It is perfectly fitting to the needs of a modern, urban target group who travels frequently.

Solar-powered

The aquaBloom Set works solar-powered and therefore does not require an electricity socket. The combination of the solar panel and rechargeable batteries makes sure that the plants will be irrigated all season long, even in overcast weather conditions.

No water tap or mains power needed

Neither tap connection nor a power socket is needed on the outdoor space. The aquaBloom Set just needs a water reservoir as source for watering the plants.

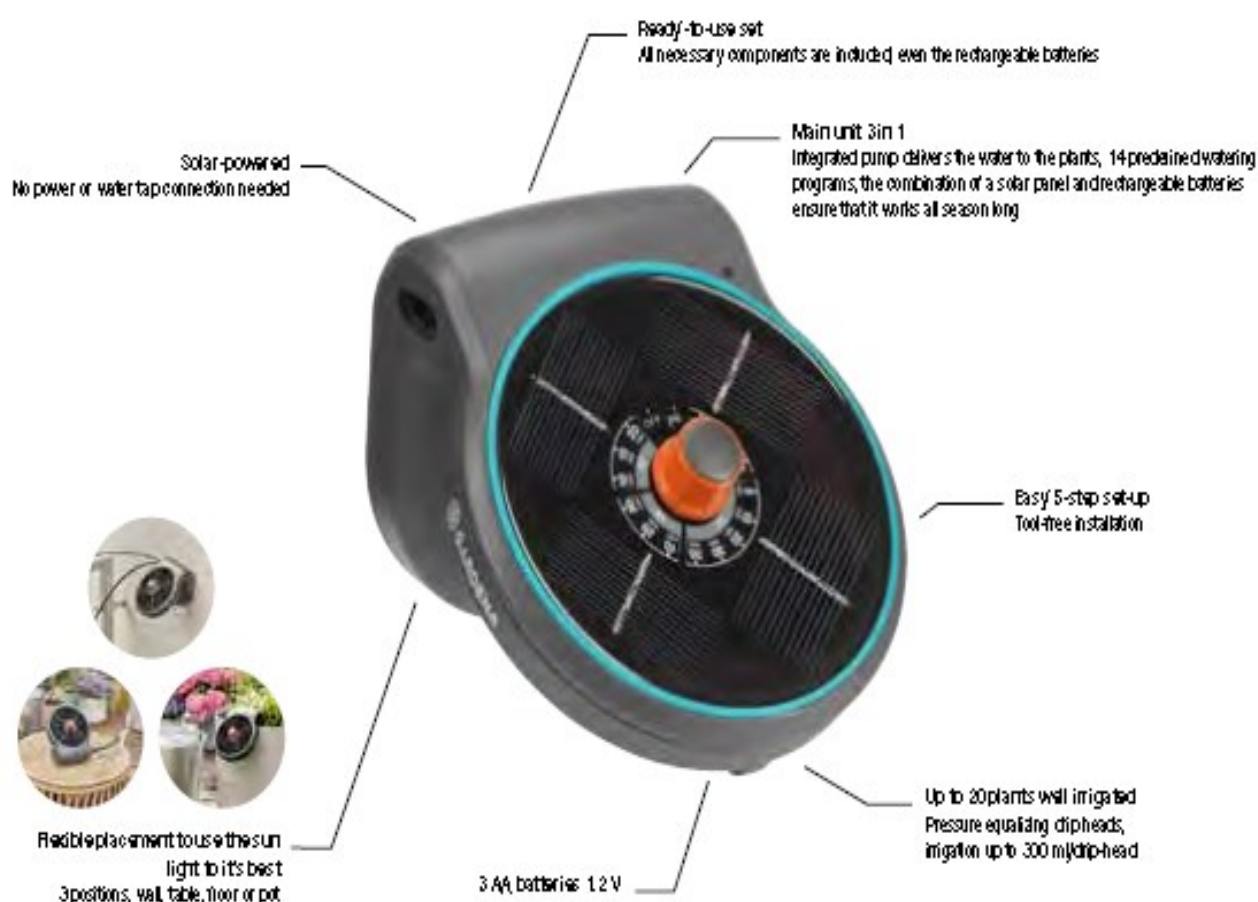

Ready-to-use set

All components - also rechargeable batteries - are included in the set. So once bought, you are ready to go.

aquaBloom Set

The solar-powered irrigation set for balconies, patios and gardens

Waters up to 20 plants equally

With the aquaBloom Set, up to 20 plants can be well irrigated due to even water supply. Even when the plants are not positioned at the same height, every plant gets the same amount of water.

True independence

The aquaBloom Set has an integrated pump to feed the Micro-Drip-System, a control unit and a solar-panel that feeds the rechargeable batteries. The control unit can be placed flexibly on the wall, table or pot – where ever it is best to catch the sunshine.

Well-cared and healthy plants

Thanks to the 14 different watering programs and the Micro-Drip-System, the plants will get the ideal amount of water at the right moment. The water penetrates to the exact point where the plant needs it: the roots.

Flexible set-up - works for pots on different levels

Simple and intuitive. Taking care of plants all season long has never been so easy and efficient.

- The quiet pump conveys the filtered water from any container to the plants which are then evenly watered with the help of the drip irrigation system.
- Uniform irrigation is also possible with height differences.
- Each pressure-compensating dripper allows an irrigation of up to 300 ml.

5 easy steps to set up the aquaBloom Set:

1 Place the aquaBloom in the sun

2 Cut the tubes to the right length

3 Place the drip heads into the pots

4 Fill the water bucket

5 Set the right aquaBloom watering program

aquaBloom Set

The solar-powered irrigation set for balconies, patios and gardens
